

OUR LAND AND WATER SYMPOSIUM

Kia Mauri Ora te Whenua

CAPACITY FOR TRANSITION

The Collaboration Lab

Melissa Robson-Williams

FUTURE LANDSCAPES

In the future landscapes contain mosaics of land use that are more resilient, healthy and prosperous than today.

Strategic Area 1

Be able to see what diversity is possible and match land use to what it is suitable for.

Strategic Area 2

Understand and model the management of land and water quality.

Strategic Area 3

Provide the novel production systems that use healthy land and water to generate high-value products.

INCENTIVES FOR CHANGE

New Zealand's primary producers are well-rewarded for producing high-value products in sustainable ways.

Strategic Area 4

Capture and share with the producers more of the value consumers associate with our products.

Strategic Area 5

Increase and share value based on mechanisms that rewards sustainable land use and high-value products.

Strategic Area 6

Enable communities to identify and adopt sustainable land use practices.

CAPACITY FOR TRANSITION

We understand what it will take, and have the tools to help us, transition to resilient, healthy and prosperous futures.

Strategic Area 7

Increase our social capital so that we can have well informed debate about alternative futures.

Strategic Area 8

Act as kaitiaki, being responsible for our actions within enterprises, in a catchment and beyond.

Strategic Area 9

Manage pressures and remove the barriers to a transition.

What is the problem?

Contested, complex and emergent....

...collaboration seen an approach for trying to manage the problems

When developing the research programme there were both problems and opportunities:

1. Evidence of impact of collaborative policy processes
2. Greater need to understand collaborative *practice* and how to grow it
3. Opportunity to examine some Māori models of collaboration
4. Evidence for impact of transdisciplinary research approaches
5. Opportunities along the way

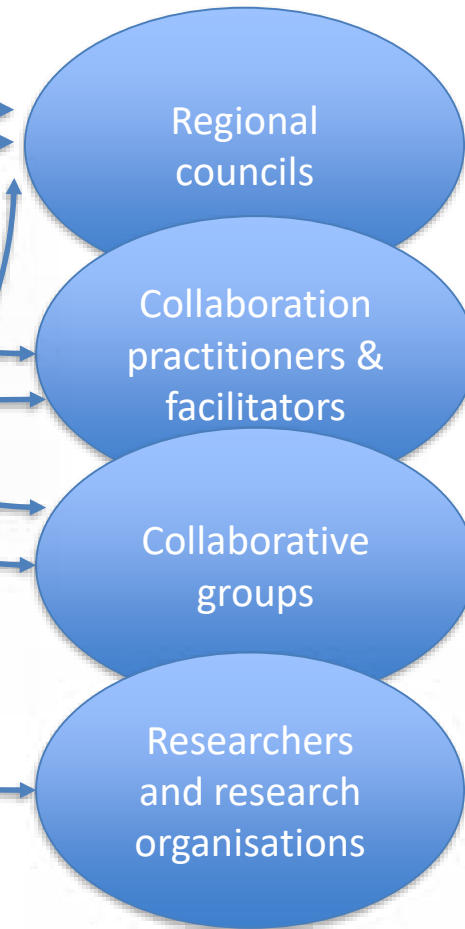

What we found and who was it for?

community confidence in collaborative processes didn't improve

Practical wisdom for helping collaborative processes

Pōwhiri as a tool for collaboration

Collaborative research approaches makes difference to usefulness and effectiveness of research

How is it building towards the Our Land and Water goal?

Contribute to OLM mission through:

- improved collaborative practice
- improved decisions on collaborative policy making
- more effective research practice

...by focusing on:

- Relevant research
- Connectivity
- Practical insights

CAPACITY
FOR TRANSITION

Thank you
