FUTURE LANDSCAPES

Next Generation Systems

Robyn Dynes

FUTURE LANDSCAPES

In the future landscapes contain mosaics of land use that are more resilient, healthy and prosperous than today.

Strategic Area 1

Be able to see what diversity is possible and match land use to what it is suitable for.

Strategic Area 2

Understand and model the management of land and water quality.

Strategic Area 3

Provide the novel production systems that use healthy land and water to generate high-value products.

INCENTIVES FOR CHANGE

New Zealand's primary producers are well-rewarded for producing high-value products in sustainable ways.

Strategic Area 4

Capture and share with the producers more of the value consumers associate with our products.

Strategic Area 5

Increase and share value based on mechanisms that rewards sustainable land use and high-value products.

Strategic Area 6

Enable communities to identify and adopt sustainable land use practices.

CAPACITY FOR TRANSITION

We understand what it will take, and have the tools to help us, transition to resilient, healthy and prosperous futures.

Strategic Area 7

Increase our social capital so that we can have well informed debate about alternative futures.

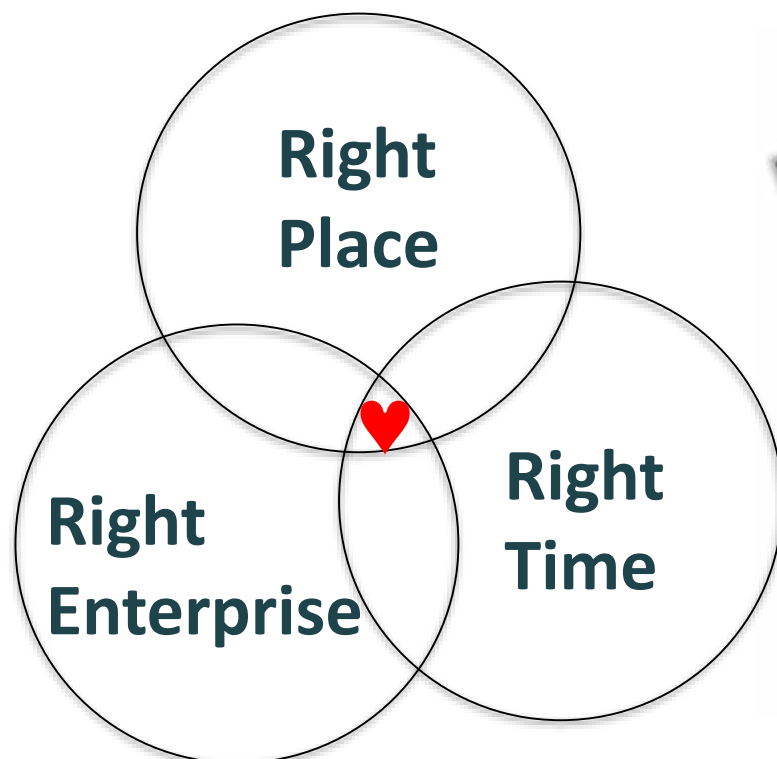

Strategic Area 8

Act as kaitiaki, being responsible for our actions within enterprises, in a catchment and beyond.

Strategic Area 9

Manage pressures and remove the barriers to a transition.

What is the problem?

Novel, knowledge-based, alternative land use systems, referred to hereafter as Next Generation Systems (NGS) exist that could relieve environmental and social pressures, the challenge facing New Zealand is how to achieve a timely transition to these systems at any meaningful scale.

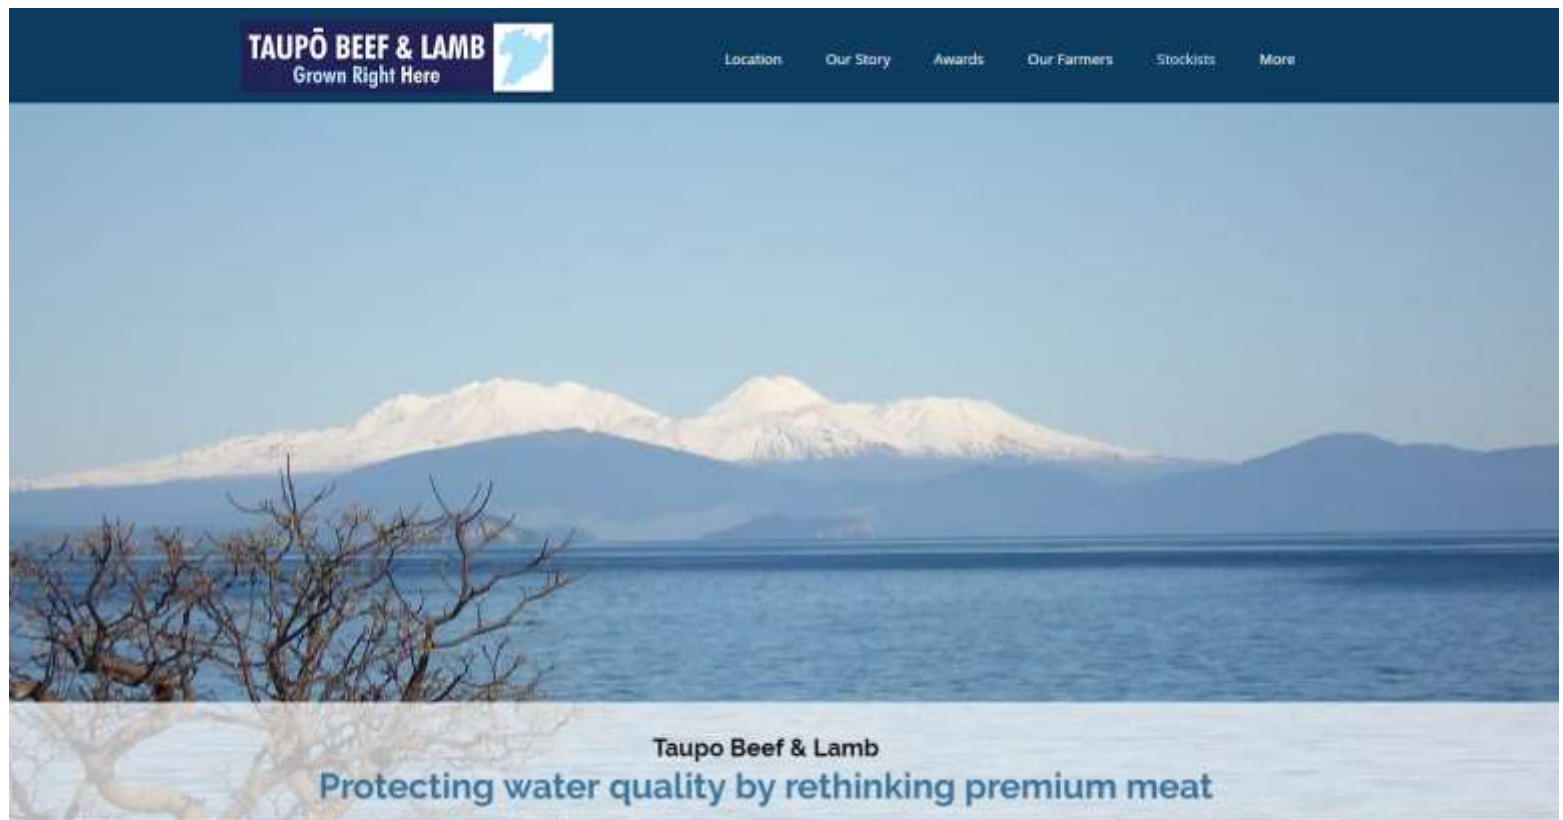

Land-use change is inherently risky.

NGS seeks to derisk and accelerate land use change

What is the solution?

Delivering Value + Impact

Farmer Feedback:

*'Start with what we
Know we can grow'....*

*'Can't afford more on-farm
investment'....*

*'We recognise there is value
in our farm data to tell an
authentic provenance
story'....*

*'Investment in LFI initiatives
is a way of future proofing
our business'....*

practices.

FUTURE
LANDSCAPES

Land-use + enterprise diversification

Drumpeel Farm

THE FARM

- Drumpeel Farms, Otane, Hawke's Bay
- 1960 effective hectares (including leased land) taking in breeding stock, finishing lambs and cattle, with 700 hectares cropped each year. About 310 hectares are irrigated.
- Main crops include wheat, barley, herbage seed, maize, peas, sweetcorn and squash, and some vegetable seed crops are also grown.
- Soils range from clays to sands, loams and peat.
- 20 000 stock units wintered, 1000 R2 bulls and 20 000 trading lambs.
- Annual rainfall of 800-850mm.

THE FAMILY

- Drumpeel Station is owned by the Drumpeel partnership and farmed by Hugh and Sharon Ritchie.
- Hugh is Chairman of the Primary Sector Water Partnership, and a founding member and Chairman of LandWISE, a sustainable cropping group in Hawke's Bay. Hugh was previously a Federated Farmers board member with responsibility for water issues at a national level.

ADAPTING TO A CHANGING CLIMATE

HAWKE'S BAY CROPPING FARM Optimising irrigation efficiency in a drier climate

THE FARM

- Drumpeel Farms, Otane, Hawke's Bay
- 1960 effective hectares (including leased land) taking in breeding stock, finishing lambs and cattle, with 700 hectares cropped each year. About 310 hectares are irrigated.
- Main crops include wheat, barley, herbage seed, maize, peas, sweetcorn and squash, and some vegetable seed crops are also grown.
- Soils range from clays to sands, loams and peat.
- 20 000 stock units wintered, 1000 R2 bulls and 20 000 trading lambs.
- Annual rainfall of 800-850mm.

A multi-strand approach is adopted at Drumpeel. Soils, crop rotation, crop priorities

Hugh Ritchie farms Drumpeel Station. At some 1960 hectares, 700 hectares of crops are planted to barley, herbage seed, sweetcorn, maize crops such as corn-on-the-cob and carrots.

The main cropping area is at Drumpeel farms and peat. The area is summer operation in the mid 1990s. Irrigation production. The water also also followed by grass, sweetcorn.

Land-use + enterprise diversification

FUTURE
LANDSCAPES

Land-use transformation

Scenario 1: High volume aquaculture production

20,000 m³/day water flow minimum

Figure 32. Eyrewell Farm diversification: Scenario 1.

Who is using the research to make a difference?

- More value
- Land use diversification
- Land use transformation

- More diverse landscapes
- New farming systems

Land owners and managers

How is it building towards the Our Land and Water goal?

- Understanding the drivers of land managers to:
 - support the process of adoption of NGS
 - Bring science to SOME gaps
 - Identify the science gaps

directly contributes to the objective of Our Land and Water **‘to enhance the production and productivity of New Zealand’s primary sector, while maintaining and improving the quality of the country’s land and water for future generations’**

**In the process we are derisking
and accelerating land use
change**
